New RIDGID for Big Pipe!

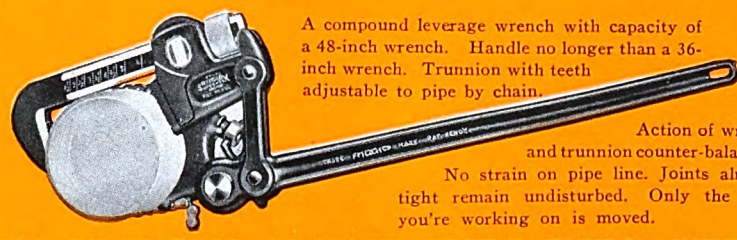
Small in Size—Giant in Action

Leverage is Power! It is compounded in the RIDGID Super-Six, which will break a tight-rusted 6-inch joint that defies three or four men equipped with an ordinary 48-inch wrench. Yet the handle of the Super-Six is as short as that of a 36-inch. It's a remarkable wrench for all big pipe work. In trenches and similar places, where elbow-room is at a premium, nothing can beat it.

Action is through chain and adjustable toothed trunnion and so perfect the design that the tremendous action is limited to joint being worked upon. No other joint is disturbed.

The saving in time and salvaged fittings on one good tear-down job will pay for the Super-Six. You can buy with confidence. Every RIDGID is guaranteed to give complete satisfaction.

See your jobber or write for complete facts today.



A compound leverage wrench with capacity of a 48-inch wrench. Handle no longer than a 36-inch wrench. Trunnion with teeth adjustable to pipe by chain.

Action of wrench and trunnion counter-balanced. No strain on pipe line. Joints already tight remain undisturbed. Only the joint you're working on is moved.
